Professional Summary

Software engineer and team leader with 5+ years managing Linux infrastructure at scale. Demonstrated experience leading SRE teams and delivering solutions on AWS/Azure. Experienced and prepared to contribute in software engineering, SRE operations, or highly technical helpdesk roles.

Core Work Experience

SRE Team Leader, WhereTo

(A Flight Centre Company)

January 2024 - June 2025

Remote/Connecticut

- Mixed technical role and people manager; led team of 3-4, tasked with Azure and AWS infrastructure improvements, some IT processes
- Implemented security, policy, and processes requirements for 2 recurring PCI-DSS compliance audits, and initial ISO 27001 compliance
- Implemented several foundational SRE processes (ticketing, SCRUM, RCA) to streamline operations and accountability, and guided monorepository implementation for Chef/Terraform codebase
- Led migration from self-hosted ELK cluster to Elastic Cloud + HA Logstash cluster for improved availability and to meet PCI FIM requirements
- Led effort to implement serverless components in Azure, replacing brittle and accident-prone Apache Mesos-based infrastructure
- Established AI-powered workflows for policy documentation and code development, establishing team standards for AI-assisted compliance and infrastructure work

Software Developer, Amazon Web Services

EC2, Security, Infrastructure, and S3 Teams

June 2020 - December 2023

Northern Virginia

- Troubleshooted operational issues with cross-team collaboration, creating operational tooling as needed
- Improved website, API, and CLI tool performance, including API TTL caching
- Designed and implemented architectural projects, including a S3 fleet health automated remediation service replacement, migration from PeopleSoft to internal API, and an S3 data migration solution
- Led worldwide deployments of storage automation services, system metric daemons, and region build automation for S3 fleets
- Improved operational tool safety, strengthened rollback alarms and deployment pipeline metrics, expanded documentation for on-call teams
- Authored design documents covering operational readiness, tooling restructuring, and internal feature launches

Recent Experience

Personal Projects

Within the last 3-6 months

Homelab

Connecticut

- Ingested Satdump data via Mosquitto MQTT and Telegraf into InfluxDB, then visualized satellite health and performance metrics in Grafana dashboards
- Deployed infrastructure updates to AWS via Terraform, and updated NixOS configurations for reproducible homelab configuration
- Added new IPv6 stack using prefix delegation from the ISP, and set up local ULA addressing ranges for local server network

Electrical Age Minecraft Mod (Kotlin)

Connecticut

- Used OpenAI Codex CLI AI tools to write 95% of code changes
- Added new power generation blocks and improved creative menus
- Resolved several long-standing GitHub issues and bugs using only Codex
- Created a new energy monitoring meter block with support for reporting to a local MQTT broker for external software control and graphing capabilities

Model Railroad Inventory System (Python/Flask/CouchDB)

Connecticut

- Used OpenAI Codex CLI AI tools to write all code changes
- Built Docker-based infrastructure and versioned CouchDB schema for data storage
- Created tools for packing flats for transportation, asset valuations for insurance
- Mature frontend and backend, including Passkey/TOTP MFA support and ACLs

Seasonal Warehouse Assistant, White Flower Farm

March 2026 - Present

Warehouse Replenishment Team

Torrington, Connecticut

- Daily freezer and live-plant replenishment, processing cancelled orders and returning items into inventory, auditing and correcting system inventory

Seasonal Field Worker, White Flower Farm

Jan 2026 - March 2026

Bareroot Processing Team

Morris, Connecticut

Seasonal Warehouse Assistant, White Flower Farm

November 2025 - December 2025

Warehouse Picking Team

Torrington, Connecticut

Software Developer, Radiocraft Minecraft Mod

July 2025 - October 2025

ARRL-Funded Project of W1BTR

Part Time - Remote/Connecticut

Technical Skills

- **Languages:** Python, Kotlin, Java, Shell **Familiar:** TypeScript/JavaScript, Ruby, Rust
- **Cloud & Infrastructure:** AWS, Azure, Chef, CDK, Terraform, Docker, RHEL, Ubuntu
- **Tools & Frameworks:** Git, ELK Stack, SCRUM/Agile/Kanban, PCI-DSS, ISO 27001
- **Hosted Tooling:** GitHub (incl. runners), Atlassian Confluence and Jira, AWS Cloud (incl. EC2, Lambda, S3, etc.) Azure Cloud (incl. Entra ID, Azure Dev Ops, VM's, Managed DB's, etc.), Cloudflare, Grafana Cloud, Elastic Cloud, Gitea (Homelab), OSA Commerce
- **AI Enablement:** OpenAI tools (ChatGPT, Codex), JetBrains AI tools, and Claude Sonnet for rapid prototyping, design reviews, and documentation automation

Education: B.S. Computer Science, Clarkson University (2019) - IT & Communications Minors
