Professional Summary

Site reliability, infrastructure, and cloud engineer with 5+ years supporting Linux-based production systems at scale.

Experience leading SRE teams, automating infrastructure, improving observability, and delivering solutions across on-premises, AWS, and Azure environments.

Looking For

Roles: Site Reliability Engineer (SRE), DevOps Engineer, Systems Engineer, Infrastructure Engineer, Cloud Engineer, and escalated IT support/helpdesk roles.

Location: Remote, hybrid, or in person; for hybrid or in-person roles, within 40 miles. Full-time onsite schedules also welcome.

Professional Experience

SRE Team Leader, WhereTo

(A Flight Centre Company)

January 2024 - June 2025

Remote/Connecticut

- Technical lead and people manager for a team of 3-4 supporting AWS and Azure infrastructure, reliability improvements, and selected IT processes
- Implemented security, policy, and process requirements for 2 recurring PCI-DSS audits and initial ISO 27001 compliance work
- Established core SRE operations including ticketing, SCRUM, and RCA processes, and guided monorepo adoption for Chef and Terraform infrastructure-as-code
- Led migration from self-hosted ELK to Elastic Cloud with HA Logstash, improving observability, availability, and PCI FIM coverage
- Led implementation of Azure serverless components to replace brittle Apache Mesos-based infrastructure and reduce operational risk
- Established AI-assisted workflows and team standards for policy documentation and infrastructure/code development

Software Developer, Amazon Web Services

EC2, Security, Infrastructure, and S3 Teams

June 2020 - December 2023

Northern Virginia

- Troubleshoot production operational issues across teams and built internal tooling to improve supportability and response
- Improved website, API, and CLI performance, including API TTL caching and related operational efficiency gains
- Designed and implemented infrastructure and automation projects, including S3 fleet health automated remediation, PeopleSoft-to-internal-API migration, and S3 data migration solutions
- Led worldwide deployments of storage automation services, system metric daemons, and region build automation for S3 fleets
- Improved deployment safety and on-call readiness through stronger rollback alarms, pipeline metrics, and documentation
- Authored design documents for operational readiness, tooling restructuring, and internal feature launches

Technical Skills

- **Languages:** Python, Kotlin, Java, Shell
- **Cloud Platforms & OS:** AWS, Azure, Cloudflare, RHEL, Ubuntu
- **Infrastructure Tools:** Terraform, Chef, CDK, Docker
- **Operations & Frameworks:** Incident Response, Root Cause Analysis, Git, ELK Stack, SCRUM/Agile/Kanban, PCI-DSS, ISO 27001
- **Developer Collaboration & Delivery:** GitHub, Gitea, GitHub Actions/runners, Azure DevOps, Jira, Confluence
- **Observability & Operations:** Grafana and Elastic in self-hosted and cloud environments
- **Identity & Business Systems:** Entra ID, OSA Commerce
- **AI Enablement:** OpenAI tools (ChatGPT, Codex) for rapid prototyping, design reviews, and documentation automation

Education: B.S. Computer Science, Clarkson University (2019) - IT & Communications Minors
Projects

Independent Personal Projects

Within the last 3-6 months

Homelab

Connecticut

- Built observability pipeline using Mosquitto MQTT, Telegraf, InfluxDB, and Grafana to monitor satellite health and performance metrics
- Deployed AWS infrastructure updates with Terraform and maintained reproducible NixOS-based homelab configuration
- Implemented IPv6 using ISP prefix delegation and local ULA addressing

Electrical Age Minecraft Mod (Kotlin)

Connecticut

- Resolved several long-standing GitHub issues and bugs
- Created a new energy monitoring meter block with support for reporting to a local MQTT broker for external software control and graphing capabilities

Model Railroad Inventory System (Python/Flask/CouchDB)

Connecticut

- Built Docker-based infrastructure and versioned CouchDB schema for data storage
- Created tools for packing flats for transportation, asset valuations for insurance
- Mature frontend and backend, including Passkey/TOTP MFA support and ACLs

Additional Experience

Seasonal Warehouse Assistant, White Flower Farm

March 2026 - May 2026

Warehouse Replenishment Team

Torrington, Connecticut

- Freezer replenishment; assembling, packing, and shipping boxes; processing cancelled orders; auditing and correcting system inventory

Seasonal Field Worker, White Flower Farm

Jan 2026 - March 2026

Bareroot Processing Team

Morris, Connecticut

Seasonal Warehouse Assistant, White Flower Farm

November 2025 - December 2025

Warehouse Picking Team

Torrington, Connecticut

Software Developer, Radiocraft Minecraft Mod

July 2025 - October 2025

ARRL-Funded Project of W1BTR

Part Time - Remote/Connecticut
